

High Precision & Torque Control **iV5**
Vector Drive

2.2~37kW (3~50HP) 3 Phase 200~230V
2.2~800kW (3~1,067HP) 3 Phase 380~480V
5.5~500kW (7.5~666HP) 400V DC Input type

Our lives with **STARVERT iV5**

**“The Optimum Solution”
iV5 series provides a full satisfaction
for all the needs**

Optimized Solution for System Drive

Control the Crane, Elevator & Continuous line system based on powerful performance

High Performance Control system

Speed/Torque control, SIN/COS encoder, PM Sensorless, Auto tuning, Endat encoder, Draw/Droop/ Process PID Control, Built-in brake control

User-friendly Interface

User-friendly keypad, Various field bus option, DriveView management

Various Option for System Application

Synchronize, SIN/COS encoder(Endat encoder), Extension I/O, EL I/O option

‘We guarantee, your satisfaction will be beyond your expectation’

iV5 series realizes the high precision vector control in entire operational area and its highly precise speed control guarantees a superb control stability in the crane, continuous line and elevator system controls.

220kW UL Certification ISO 14001, ISO 9001

Optimized Solution for System Drive

Control the continuous line as Metal processing/Paper & Paperboard, Crane and Elevator system based on powerful performance

System Drive

iV5 provides the optimum system operating environment with various function and superior control performance

Continuous line

Winding/Unwinding System of Metal processing, Paper & Paperboard, Textile, Cable line

Customized function for continuous line

- Diameter operating
- Taper function
- Splicing control
- Flux/Tension control
- Inertia compensation
- Bobbin random set function
- Quick stop
- To use Dancer/Load cell
- Online set Winding/Unwinding
- Over/Under winding
- Breakage detecting function
- Core fault detecting function

Diameter operating

Tension control

Tension control

Taper function

iv5 guarantees system safety and reliability with enhanced protection function and various option

Crane system

iv5 can operate crane system with load balancing, speed/position control, brake control of harbor crane, overhead crane, tower crane, parking system and automation warehouse

Brake control

Synchronized operating with speed/position

Load balancing with droop control

iv5 guarantees comfortable and stable driving with precise position control

Elevator system

iv5 guarantees stable driving and monitoring the elevator with both optimum speed pattern and position control.

Rollback Prevention : Anti-Rollback Function (without external load cell)

Time Chart for Anti-Rollback Function

Before Anti-Rollback Algorithm

After Anti-Rollback Algorithm

Precise Control

Precise speed/torque control, Accurate control with SIN/COS encoder, PM Sensorless control, Auto tuning(at standstill), Draw/Droop/Process PID Control, Brake Control

High Performance

iV5 guarantees precise speed/position control and synchronous operation in various systems.

Speed/Position Synchronized operation

- Speed/Position synchronizing operation
- Precision synchronizing operation in 5°
- Synchronizing in driving / Synchronizing in starting
- Synchronous operation with multiple motors
(with synchronized option card)

Speed synchronous operation

Position synchronous operation

Autotuning

Standstill autotuning

This unique technology of LS allows the autotuning operation to be performed even with the motor shaft directly connected to the load.

Especially, this standstill type autotuning is very useful in the lift application because it does not require removal of brake coupling connected to the motor.

Rotation autotuning

This type of autotuning has been widely used for the vector control drive. As the name implies, this requires the motor shaft to be free of the coupling for a proper operation.

Precise and safe control system

Draw/Droop/Process PID control

Draw/Droop/Process PID control is provided for precise control such as tension control, linear velocity control, temperature and pressure control and useful functions easily implemented like Load balancing.

Draw control

Process PID control

Droop control

Built-in brake control for vertical loading safety

Brake Control

For applications which have a risk of dropping, for instance elevator and crane system, brake control is built in

Draw control

Extreme precise control

SIN/COS encoder option

With SIN/COS encoder option, users can control more precisely than normal encoder

Features

User Friendly Interface

Easy to use with user-centric keypad and removable terminal blocks

A variety of communication supported such as LS485, Modbus-RTU, Device Net, Profibus-DP, CC-Link

Systematic and efficient management of system through DriveView

Convenience

Easy to maintain drive/motor parameter via PC

Drive View

Through DriveView program, drive system can be monitored with PC and managed to maintain drive/motor parameters.

- Window based Graphic User Interface (GUI)
- LS485, Modbus-RTU
- Max 31 drives connection
- Reporting
- Event logging
- Integrated control console
- Offline editing
- Data upload/download
- 4ch oscilloscope
- Trigger function

● User friendly design

■ Easy-to-use keypad

By adopting a user-centered operation keypad, parameter setting becomes easier and when applying to system, a variety of required information can be monitored.

■ International standard removable terminal block

Wiring/maintenance become easy by international standard acquired terminal block and use also becomes easy by choosing various input/output options depending on intended use

● Various fieldbus communication options

Providing a variety of fieldbus communication options such as LS485, Modbus-RTU, Device Net, Profibus-DP, CC-Link and so forth, users can monitor and operate drives connected with PLC, HMI and other controllers.

■ Drive View

■ Drive integrated console

■ Parameter management

■ Reporting 1

■ Reporting 2

■ Oscilloscope/Trigger

Wider Applications with Various Options

Synchronous option, SIN/COS encoder option, expansion I/O, Elevator dedicated I/O and so forth

A wide range of options and applications

Variety

- Closed/Open loop continuous line control
- Load balance function
- Diameter operating /Taper function
- Splicing control /Inertia compensation
- Breakage detecting function
- Quick stop

- Closed/Open loop continuous line control
- Flux/Tension control with PID function
- Diameter operating /Taper function
- Splicing control /Inertia compensation
- Breakage detecting function
- Zero velocity control
- Quick stop

- Closed/Open loop continuous line control
- Flux/Tension control with PID function
- Diameter operating /Taper function
- Splicing control /Inertia compensation
- Breakage detecting function
- Jog operation at low speed
- Quick stop

- Built-in brake control
- Speed/Position synchronous operation
- Load balance function
- Dedicated DB unit

- Built-in brake control
- Load balance function
- Dedicated DB unit
- Zero velocity control
- Precise control through SIN/COS encoder

- Speed/Position synchronous operation
- Load balance function
- Precise control through SIN/COS encoder
- Zero velocity control
- Smooth acceleration and deceleration

- Elevator dedicated control mode
- Geared/gearless elevator operation
- Precise control through SIN/COS encoder Elevator master function with on-board option
- Optimum speed pattern / no creep speed
- Battery operation during blackout
- Load cell optimum compensation

- Machine tools / press
- Cart
- Hydraulic pump, high speed compressor, tower blower and so forth

iV5 Option

■ Synchronization option

- Speed/Position synchronizing operation
- Consuming current : 300mA
- Input frequency : 100kHz
- Open collector output
- Multiple band operation

■ CC-Link

- Max. 10Mbps speed
- Customized LS profile
- CC Link customized cable
- Built-in termination resistor
- Remote I/O : each 32 point
- Remote register : 4 words

■ Elevator I/O

- Position sensor/Safety switch input
- Car position output
- E/L position and sequence control
- MC/Brake operation signal output
- E/L exclusive connector

■ LS485/Modbus-RTU

- 1200/2400/4800/9600/19200/38400 bps speed Bus, Multidrop link system
- Max. 31 node
- Max. 1200m period (recommended 700m)

■ Device Net

- 125/250/500kbps speed
- Bus topology
- Max. 64 node
- Max. 500m (125kbps)
- Enhanced online diagnosis function

■ Profibus-DP

- Max. 12Mbps speed
- Max. 32 station
- Bus topology
- Enhanced online diagnosis function

■ Extension I/O

- Analog input : 5 channel
- Analog output : 2 channel
- Other functions are same as SIO board

■ 24V Encoder I/O

- 24V encoder
- Encoder power fault detection
- Other specifications are same as SIO

■ SIN/COS + Endat encoder option

- Selectable Endat & Sin/Cos Option
- Max. 3,600rpm speed
- Enhanced Comfortable feeling in Car
 - Compatibility with Heidenhain Encoder
 - ECN413, ECN1313, ERN487, ERN1387

*Note1) Please contact us to control continuous lines with open loop control

*Note1) For more than 4 analog inputs, users need to additionally purchase expansion I/O.

■ Common Specifications

Item			Detailed Specification
Inverter type			Voltage source inverter using IGBT
Control	Control method		• Field oriented vector control inverter with speed sensor attached
	Speed control accuracy		• Analog setting: $\pm 0.01\%$ ($25 \pm 10^{\circ}\text{C}$) of max. Speed (1,800rpm) • Digital setting: $\pm 0.01\%$ ($0 \sim 40^{\circ}\text{C}$) of max. Speed (1,800rpm)
	Speed setting resolution		• Analog setting: $\pm 0.01\%$ of maximum Speed • Digital setting: 0.1rpm
	Cut-off frequency of ASR		50Hz
	Torque control accuracy		3%
	Overload Capacity		CT: 150%/1Min
	Accel/ Decel	Time setting	0.00 ~ 6000.0 sec (Time unit can be set)
		Combination Pattern	4 Combinations of acceleration / Deceleration Time Linear, S-Curve
Braking	Braking method		Dynamic braking using external resistors
	Braking torque		150%
	Braking resistor		External braking resistor should be provided.
Input	Speed setting		• Digital setting via keypad • Multi-step-speed setting by input terminal selection • Analog input setting of -10~10V or 4~20mA • Remote setting by option card
	Analog input		• 3Channels (AI1, AI2, AI3*, (AI4, AI5: Extended I/O)) • -10→10V, 10→10V, 0→10, 10→0V, 0 ~ 20mA, 20 ~ 0mA, (*AI3(AI5:Extended I/O): Motor NTC/PTC selectable) • Selectable among 15 different user-defined functions • AI3, AI5(Motor NTC): only available with LG-OTIS motors.
	Contact input		• FX, RX, BX, RST, P1~P7 • Selective among 42 different user-defined input functions
Output	Analog output		• 2 channels (AO1, AO2) • -10→10V, 10→10V, 0→10V, 10→0V output • Selectable among 41 different user-defined input functions
	Contact output		• 2 channels (1A-1B, 2A-2B) • Fault alarm relay: 1 channel (30A-30C, 30B-30C)
	Open Collector		1 Channel (OC1/EG)
Protection			Overcurrent, Overvoltage, Low voltage, Inverter overheat, Inverter thermal sensor malfunction, Motor overheat, Motor thermal sensor malfunction, Overspeed, Instantaneous IGBT gate block (BX), Fuse blown open, External Trip, Pulse encoder malfunction, Electronic thermal function, Inverter overload, Ground fault current, IGBT short, Communication error, FAN power error
Environment	Installation condition		Indoor, Free of Corrosive gas and Direct sunlight(Pollution Degree 2)
	Ambient temperature		-10 ~ 40°C (Non-frozen condition)
	Humidity		Below RH 90% (Dewdrop should not be formed)
	Cooling method		Forced ventilation by cooling fan
	IP Type		IP20 : 2.2 ~ 22kW(MD) IP00 : 30 ~ 500kW
	Altitude		Below 1,000m (From 1000 to 4000m, the rated input voltage and rated output current of the drive must be derated by 1% for every 100m.)
	Vibration		Below 5.9m/sec ² (≈0.6G)

AC Input Type

2.2 ~ 22kW (200V/400V)(MD)

Note) ● : Power terminal ○ : control terminal

AC Input Type

30 ~ 37kW (200V)
30 ~ 375kW (400V)

Note) ● : Power terminal ○ : control terminal

AC Input Type

500kW / 800kW (400V)

Note) ● : Power terminal ○ : control terminal

DC Input Type

5.5~22kW / 280~375kW (400V)

Note) ● : Power terminal ○ : control terminal

* SIO terminal indication for SV2800~3750iV5: PE → PENT, GE → G24X

Note 1) It is used when drive control circuit is energized from auxiliary power source (220 VAC) without main power supply. Use insulated transformer to separate from main power supply. (Transformer capacity: above 100VA recommended)

Wiring

DC Input Type

30 ~ 220kW/500kW (400V)

Warning) It must be energized AC220V (50/60Hz) to terminal of FAN1 and FAN2 because 30 ~ 500kW-4DC series have a cooling fan for AC power drive and MC. If not, Trip (30~160kW: "FAN/MC PWR", 220kW: "FAN PWR") will be occurred. The drive is not operated unless trip is released after AC220V inputs. The recommended order of power input and cutoff is as shown below.

(The order of power On: 220VAC → P(+)/N(-) → Run, The order of power Off: Stop → P(+)/N(-) → 220VAC)

Note) ● : Power terminal ○ : control terminal

Note 1) It is used when drive control circuit is energized from auxiliary power source (220 VAC) without main power supply. Use insulated transformer to separate from main power supply. (Transformer capacity: above 100VA recommended)

Note 2) The power of 220VAC is must be. supplied for the operation of internal cooling fan and/or Magnetic contactor.

Use insulated transformer to separate from main power supply. (30~75kW(100VA), 90~160kW(150VA), 220/500kW(500VA) recommended)

7.5~22kW (MRL)

Note) ● : Power terminal ○ : control terminal

Terminal Function

■ AC power input type

Name	Function	Description
R, S, T	3Phase AC input connection	Connected to 3 phase input power supply
U, V, W	Inverter Output	Connected to 3 phase induction motor
G	Grounding	Used for inverter frame earth
B1, B2	Braking Resistor	Connected to braking resistor
P1(+), P2(+)	DC Reator and DB Unit	Used for DC Reactor, DB Unit and DC link common connection
P(+)	DC Link common	DC Link common connection
N(-)	DC Unit	Used for DB Unit and DC link common connection

■ DC power input type

Name	Function	Description
P(+), N(-)	DC input power	Connected to DC input power source Connected from DC power supply (PWM converter) within max. 30m
U, V, W	Inverter Output	Connected to braking resistor
G	Grounding	Used for inverter frame earth
FAN1, FAN2	Internal cooling fan and MC drive power source	Connected to single-phase 220V AC power source

■ Control Circuit Terminals

Item	Name	Function	Description
Contact Input	FX	Forward Run / Stop command	● Forward/Reverse RUN Command is ON when closed to CM in NPN input mode.
	RX	Reverse Run / Stop command	● Motor stops when FX/RX is ON or OFF at the same time.
	BX	Emergency Stop	● ON when closed to CM in NPN input mode, Free-run to Stop and deceleration to stop. It does not trigger fault alarm signal.
	RST	Fault Reset	Resets when fault condition is cancelled.
	P1(MMO) P2(MM1) P3(ATO) P4(FHM) P5(BAT) P6(BRC) P7(MCC)	Multi-function input contact	● 1 function can be selected among 42 different functions as shown below. (Multi-step speed 1 / 2 / 3, Jog, MOP Up / Down / Save / Clear, Analog Hold, Main Drive, 2nd function, Accel./ Decel. Time selection, Reverse rotation prevention, Process PI Disable, Timer input, Soft start cancel, ASR P/PI Gain switch-over, ASR P/PI switch-over, Flux command value switch-over, Pre-excitation, Speed/Torque control, Torque limit ON/Off, Torque bias ON/Off, Battery operation On/Off, Low voltage trip detection prevention)
	CM	COMMON	● In NPN input mode, it turns On when each contact is closed to CM terminal. ● In PNP input mode, it turns On when each contact is closed to external 24V input.
Analog input	VREF	Power supply for analog setting	● Reference voltage by variable resistor (+10V) : 10kΩ
	AI1	Voltage / Current Signal Input	● Voltage input (-10 → 10V, 10 → -10, 0 → 10V, 10 → 0V) current input (0 → 20mA, 20 → 0mA), Motor NTC/PTC are selectable via Multi-function Analog input.
	AI2		● Jumper setting in Voltage Input: Jumper set as default → AI1, AI2: Jumper set on left side, AI3 Switch set on left side ● Jumper setting in Current Input → AI1, AI2: Jumper set on right side
	AI3/Them	Voltage Input Motor NTC/PTC Input	● S/W setting in motor NTC (Higen motor)/PTC input → AI3: switch set on right("Them") side. ● Selectable 15 functions as following: (Speed, Process PID controller, Process PI controller feedback, Draw, Torque, Magnetic flux, Torque bias, Torque limit, Motor NTC/PTC...)
	5G	COMMON	● COMMON terminal for Analog input

Encoder input	PE GE	P/S (Power supply) for Pulse Encoder ¹⁾	+5V Line Drive Power 0V
	A+ A- B+ B-	Encoder A-phase signal Encoder B-phase signal	• A, B signal for Line Drive Type Encoder. • Set the JP2 switch at "P5" on I/O PCB and set the JP4 switch to "LD" for the use of Line Drive. * Jumper set as default
	PE GE	P/S (Power supply) for Pulse Encoder ^{Note 1)}	+5V Open Collector Power 0V
	PA PB	Encoder A-phase signal Encoder B-phase signal	• A, B signal for Complementary or Open Collector Type Encoder. • Set the JP2 switch at "P15" on I/O PCB and set the JP4 switch to "OC" for the use of Open Collector.
Encoder Output	Z+(PZ) Z-	Encoder Z-phase signal	Caution) The usages of Z-phase signal are as follows and its functions will be available soon. • Use for Z-phase pulse provided encoders. • Z+ and Z- signals are used for Line Drive type, so set the JP5 switch to "LD" • PZ signal is used for Open Collector type, so set the JP5 switch to "OC"
	RA GE RB GE	Encoder signal output: A-phase Output Common Encoder signal output: B-phase Output Common	Encoder A, B phase signal output - Open Collector Type ^{Note4}
Analog Output	AO1	Analog Output 1	• -10 → 10V, 10 → -10, 0 → 10V, 10 → 0V output
	AO2	Analog Output 2	• Selectable among 41 functions (Analog input value, Pre Ramp Reference, Post ramp reference, ASR Input Reference, Motor Rotating Speed, Speed Deviation, ASR Output, Torque bias, Positive Trq Limit, Negative Trq Limit, Regeneration Trq Limit, Torque Reference, Torque current ref., Torque current, Flux reference, Flux Current ref. , Flux Current, ACR output of axis Q, ACR output of axis D, Voltage reference of axis D, Voltage reference of axis Q, Output current, Output voltage, Output power, DC LINK voltage, Process PI reference, Process PI Feedback, Process PI output, Motor temperature, Motor temperature, Inverter temperature, Inverter i2t)
	5G	COMMON	• COMMON terminal for Analog input
Relay output	1A 1B	Multi-function relay output 1 (A Contact)	• Selectable among 41 functions (Inverter ready, Zero speed detection Seed detection, Speed detection (ABS), Speed arrival, Timer out, Low voltage alarm, run, regenerating, Motor overheat warning, Inverter overheat warning, Speed agree, Torque detection, Torque limit detection, Overload warning, Stop, Steady run, Brake output, WEB brake, UP to speed, False core)
	2A 2B	Multi-function relay output 2 (A Contact)	
	OC1 EG	Open Collector Output	
	30A	Fault alarm A contact	• Outputs when fault occurs.
	30B	Fault alarm B contact	• Deactivated in BX condition.
	30C	COMMON	• COMMON for A, B
Switch	JP1	Encoder Input-pulse Type	LD (Line Drive) OC (Open Collector or Complementary)
	JP2 ^{Note 2)}	Encoder Power Supply	DC +5V / +12V / +15V selectable usages
	JP4 ^{Note 3)}	PNP/NPN Input mode	PNP/NPN contact Input mode selection

Note 1) Wire Encoder power source according to series I/O board as below. 2.2kW ~ 800kW → PE : "+", GE : "-"

Note 2) I/O board of SV2800~3750iV5 Class is classified into 2 types: 24V and 5/12/15V Encoder power Encoder power is set by PIN(AI4(24V), AI5(5V), AI6(12V), AI7(15V))

Note 3) NPN/PNP Input mode selection are not supported for SV2800~3750iV5 series' I/O board.

I/O Board

1) Encoder wiring and Jumper setup (+15V Complementary or Open collector)

2) Encoder wiring and Jumper setup (+5V Line drive)

3) Analog Input Jumper setup (Voltage/ Current/ Motor NTC inputs)

Warning

- Do not change the jumper set for the encoder type during operation. The Jumper type change during operation results in a serious system damage. Jumpers should be set properly before the drive operation.
- The NTC input of the analog input 3(AI3) is only available with OTIS-LG motors. Use of different type of NTC may cause the motor damage due to overheating.

Loader Use

- Data and status display

MODE

- Shift between function groups
- Shifting from group code to the upper code

- Function code shift
- Shift to next function code
- Data increase in set up mode

- Reverse run command key
- Only available, with loader operation
- LED is turned ON with reverse run
- Blinks during Acc/Deceleration of reverse run

- Shift to function code
- Shift to previous code
- Data is decreased in set up mode

PROG

- Data set up start

ENT

- Data set up completion

SHIFT/ESC

- Decimal point shift
- Only available in case of data setup

FWD

- Forward run command key
- Only available with loader operation
- LED is turned on with forward operation
- Blinks during Acc/Deceleration of forward operation

STOP/RESET

- Stop command
- Available with the loader operation
- LED is turned on when drive stops its operation
- Blinks when fault occurs
- Reset
- Fault reset

■ Loader Use Instruction

Classification	Display	Function Name	Function
KEY	MODE	Mode Key	shift between groups. shift from a group code to upper code.
	PROG	Program Key	Parameter setting value change.
	ENT	Enter Key	Saving altered setting values.
	▲ (up)	Up Key	Shift between codes and increase the parameter value.
	▼ (down)	Down Key	Shift between codes and decrease the parameter value.
	Shift/ESC	Shift/ESC Key	In case of set up mode, it is operated with the shift key. Operation with ESC key in non-set up mode.
	REV	Reverse run	Reverse run key.
	STOP/RESET	Stop/Reset Key	Stop key when drive is on operation.
LED	FWD	Forward Key	Forward run key.
	(REV)	Reverse run key	Turns on at reverse operation. Blinks while the drive is on Acc/Deceleration and then turns on the constant speed operation.
	(STOP/RESET)	Stop/Fault display	Turns off when drive stops operation. Blinks when fault occurs.
	(FWD)	Forward Run Display	Turns on during forward operation. Acc/Deceleration running modes blink the lamp and it is turned on in the forward operation.

Shifts Between Each Groups and Codes in the Loader

■ Shifts between each groups and codes in LCD loader

The [MODE] key is used for transfer to the other group and the [▲UP] and the [▼down] keys are used to move up and down in the same group.

● The user group and the second group are omitted between shifts of each group.

Function Codes Table

* ' - ' mark of communication address indicates communication exclusion.

* Setting during Drive operation (Yes : possible, No : impossible)

► ED 100sec standard.

► Resistance value is based on the self-cooling standard.

2) Brake resistor wiring

Brake resistor has attached a temperature detectable sensor for fire protection.

See below when in use.

Brake resistor terminal blocks	Drive terminals	Operation
B1, B2	P, BR	
P7, CM	One of the multi function input terminals, out of P1~P7, of control terminals board is used as defining "External trip signal contact B"	The contact is ON in normal temperature and opens in overheat.

2. Braking Unit

- ① SV037DBH-2: 37kW/200V Class Braking Unit (10% ED)
- ② SV037DBH-4: 37kW/400V Class Braking Unit (10% ED)
- ③ SV075DBH-4: 75kW/400V Class Braking Unit (10% ED)
- ④ SV075DB-4 : 75kW/400V Class Braking Unit (100% ED)
- ⑤ SV220DB-4 : 220kW/400V Class Braking Unit (100% ED)

- The Combination of two braking unit for 400V class is possible for more than SV900iV5-4 capacity.
- When ED is more than 10%, Use the braking unit for 100% ED (Ex: vertical load such as crane, hoist)
- When the drive capacity is more than 220kW, use the braking unit for SV220DB-4 (100% ED).
- Refer to description manual included in braking unit product for the use of 100% ED braking unit.

1) Combination of braking unit

Drive		SV[][][][][]iV5-2		SV[][][][][]iV5-4			
Braking unit		0300 / 0370	0300 / 0370	0450 / 0550 / 0750	0900 / 1100 / 1320 / 1600	2200	2800 / 3150 / 3750
200V	37kW	1					
	37kW		1				
400V	75kW			1	2		
	220kW					1	2

Note) 1. Example) Combine two braking units of 75kW ~ 400V Class for SV-900iV5-4(90kW) Class.
2. Refer to the Braking Unit user manual that came with the braking unit.

2) Braking resistor for braking unit

Braking Unit	100% of Braking Torque, 10% ED	
	Resistance [Ω]	Rated Power [kW]
37kW ~ 200V	3	5
37kW ~ 400V	12	5
75kW ~ 400V	6	10
75kW ~ 400V	6	Refer to extra manual in the case of 100% ED braking unit.
220kW ~ 400V	2	

● Terminal functions

Terminal name	Description
P/B1	Connection to drive terminal P2 or P and B2 of braking resistor.
N	Connection to drive terminal N
B2	Connection to brake resistor B2
G	Ground terminal
IN+	Control connection lint(used when SLAVE MODE)
IN-	Control connection lint(used when SLAVE MODE)
OUT+	Control connection lint(used when MASTER MODE)
OUT-	Control connection lint(used when MASTER MODE)
30A/30B/30C	Fault signal output terminal, when the protection function of braking unit operates. 30A : Contact A, 30B : Contact B, 30C COMMON

Braking Unit and Resistor

● Display functions

Displayed item	Description
POWER	Main power in braking unit turns on the POWER LED. Generally the braking unit is wired to Drive so, once the input main power of drive is on the POWER LED of braking unit turns on.
RUN	While braking unit operates its normal operation by the motor regenerative energy, the RUN LED blinks.
OHT	During the braking operation, if the braking unit heat sink is overheated and exceeds its limited value, the overheat protection function operates. This blocks the braking unit signal and then turns on the OHT LED.
OCT	During the braking operation, if over current flows in the main circuit of braking unit inside then the over current protection function is operated in order to prevent the circuit from over current. The TURN ON signal of braking unit is blocked and then turns on the OCT LED.

■ Terminal Block and Braking Unit

Main circuit terminal block

Control circuit terminal

■ Wiring

1) Single use of Braking unit

2) Double use of Braking unit

■ Combination of the Braking units and Braking resistors

● 30~37kW(200V/400V)

Fault Solution and Check

■ Fault Display

Drive faults activate its protection functions which enable the alarm operation and each fault status is displayed in the loader. Refer to table shown below for the LCD loader displays.

Protection function	LCD Display	Description
Over current	OC-U OC-V OC-W	Drive turns off its output when the output current of the drive flows more than 200% of the drive rated current.
Ground fault protection	Ground Fault	Drive turns off its output when a ground fault occurs and the ground fault current is more than the internal setting value of the drive. Over current trip function may protect the drive when a ground fault occurs due to a low ground fault resistance.
Over voltage protection	Over Voltage	Drive turns off its output if the DC voltage of the main circuit increases higher than the rated value (200V series : 400V DC, 400V Series : 800V DC) when the motor decelerates or when regenerative energy flows back to the drive due to a regenerative load. This fault can also occur due to a surge voltage generated at the power supply system.
Low voltage protection	Low Voltage	Drive turns off its output if the DC voltage is below the rated level(200V Series: 200VDC, 400V Series : 400Vdc) because insufficient torque or over heating of the motor can occurs when the input voltage of the drive drops.
Over load trip (Over load protection)	Over Load	Drive turns off its output if the output current of drive is over 180% of motor rated current and over load trip time. (only applicable to over 90kW drives and also V/F control mode)
Fuse open	Fuse Open	Drive turns off its output by opening the fuse when something is wrong with the main circuit IGBT to protect the wiring from being damaged from short currents
Drive over heat	InvOver Heat	Drive turns off its output if the heat sink over heats due to a damaged cooling fan or an alien substance in the cooling fan by detecting the temperature of the heat sink.
Drive NTC thermister open	InvThem OP	Drive turns off its output if the NTC Thermister, which measures the temperature of drive, is open.
Motor over heat	MotOver Heat	Drive turns off its output if the motor is over-heated to protect the motor. This protective function prevents the motor from over heat.
Motor NTC thermister open	MotThem OP	Drive turns off its output if the NTC Thermister, which measures the motor temperature, is open.
Electronic thermal	E-Thermal	Internal electronic thermal of the drive determines the over heating of the motor. If the motor is overloaded the drive turns off the output. Drive cannot protect the motor when driving a multi-pole motor or when driving multiple motors, so consider thermal relays or other thermal protective devices for each motor.
External fault	Ext Trip-B	This is used if the user wants to turn off the drive output due to external fault signal.
IGBT short	Arm short-U Arm short-V Arm Short-W Arm Short-DB	Drive turns off its output if IGBT Arm or output shorts occur.
Encoder error	Encoder Err	This is displayed if there is a problem of encoder signal.
BX Protection (Instant cut off)	BX	Used for the emergency stop of the drive. The drive instantly turns off the output when the BX terminal is turned ON, and returns to regular operation when the BX terminal is turned OFF. Take caution when using this function.
Motor over speed	Over Speed	The motor runs exceeding 120% of its maximum default speed.
Communication error	COM Error CPU Error	This is displayed if there is any types of communication errors between the drive main and loader.

Basic configuration

Proper peripheral devices must be selected and correct connections made to ensure proper operation.
An incorrectly applied or installed drive can result in system malfunction or reduction in product life as well as component damage.
You must read and understand this manual thoroughly before proceeding.

Memo

Memo

Safety Instructions

- For your safety, please read user's manual thoroughly before operating.
- Contact the nearest authorized service facility for examination, repair, or adjustment.
- Please contact a qualified service technician when you need maintenance.
Do not disassemble or repair by yourself!
- Any maintenance and inspection shall be performed by the personnel having expertise concerned.
